

Instalacion LEMP

Instalamos Nginx y comprobamos que funcione

`sudo apt install nginx -y`

`sudo systemctl status nginx`

```
serralta@serralta:~$ sudo systemctl status nginx

Luego instalamos mysql

Instalamos PHP-FPM

sudo apt install php-fpm php-mysql -y

```
serralta@serralta:~$ php -v
PHP 8.3.6 (cli) (built: Jul 14 2025 18:30:55) (NTS)
Copyright (c) The PHP Group
Zend Engine v4.3.6, Copyright (c) Zend Technologies
    with Zend OPcache v8.3.6, Copyright (c), by Zend Technologies
```

Ahora configuramos Nginx para usar PHP-FPM

Modificamos el siguiente archivo:

```
sudo nano /etc/nginx/sites-available/default
```

```
server {
    listen 80 default_server;
    listen [::]:80 default_server;

    root /var/www/html;
    index index.php index.html index.htm;

    server_name _;

    location / {
        try_files $uri $uri/ =404;
    }

    location ~ \.php$ {
        include snippets/fastcgi-php.conf;
        fastcgi_pass unix:/var/run/php/php8.1-fpm.sock;
    }

    location ~ /\.ht {
        deny all;
    }
}
```

Para probar el php creamos un archivo de prueba

```
GNU nano 7.2 /var/www/html/info.php *
<?php
phpinfo();
?>
```

[illegible]

Ahora comprobamos la conexión con MySQL

Creamos el siguiente archivo:

`sudo nano /var/www/html/testdb.php`

```
GNU nano 7.2 /var/www/html/testdb.php
<?php
$conn = mysqli_connect("localhost", "phpuser", "php123", "mysql");

if (!$conn) {
    die("Error de conexión: " . mysqli_connect_error());
}

echo "Conexión correcta a MySQL!";

mysqli_close($conn);
?>
```

The screenshot shows a web browser window with the address bar displaying "192.168.1.135/testdb.php". The browser's security warning indicates "No es seguro" (Not secure). The page content displays the message "Conexión correcta a MySQL!". The browser's developer tools are open, showing the "Paletools v26.0.10" extension and a "Todos los marcadores" (All bookmarks) button.
